My First Human Body Book (Dover Children's Science Books)

Synopsis

Here's the most entertaining way for children to learn how the human body works: 28 fun and instructive, ready-to-color illustrations that explore the muscular, skeletal, nervous, digestive, respiratory, and immune systems. Kids will discover how their voice box works, how many bones they have, how thousands of "tasters" on their tongues help them distinguish flavors, how the DNA in their cells is different from everyone else's, and so much more. Filled with astonishing details, this head-to-toe survey of the body is fascinating to read and fun to color!

Book Information

Series: Dover Children's Science Books

Paperback: 32 pages

Publisher: Dover Publications; Green ed. edition (January 19, 2009)

Grade Level: 1 - 5

Customer Reviews

This is a great coloring book about the human body! We are using it in our home school and it includes the following systems: skeletal, muscular, circulatory, immune, respiratory, digestive, urinary, nervous, and integumentary. I am using it with my 6 year old son and it is just right for his age group. He is having a great time with it! For my 10 year old son I am using another book from the Dover Coloring Series. It is called Human Anatomy by Margaret Matt. This second book is much more detailed and is just right for him. LQ.

This was a perfect book for our 3rd grade unit for the human body. My only complaint would be that

the esophagus was called the food tube, I think it would have been better if Dover would just go ahead and use the anatomy words for the parts, even if they are big words, it gives kids a jump start on future years. And food tube? It sounds silly....

I can see that the cover clearly states that this is a coloring book, but when my 7 year old asked if she could get "a really cool book about the body" she didn't know it was, so she was disappointed when her kindle version just arrived and was black and white. i think the book is nice, i'm just not sure of the point of a kindle version of it.

I was under the impression this was a book however it turns out to be a black and white coloring book(a good one. My 4 year old does enjoy it. Arrived promptly!

Only buy if you think your child deserves to 'educated' with a book containing glaring inaccuracies. Look no further than page 4, which shows both heads of biceps brachii originating from the coracoid process; in reality the long head originates from the supraglenoid tubercle. Students of anatomy deserve accuracy, no matter their age or level of knowledge.

My First Human Body Book has a lot of helpful information in it. I even learned something. It is more about how the body works with interesting facts. If you are looking for something that teaches the specific bones and muscles, don't buy this book. Overall, it is good for elementary age students.

This is more of a color book type activity but is packed full of fun facts and information for the kids to learn. we are using it for our "about our bodies" science unit for homeschool (K & 1st grade) they love it!

We are using this with a group of homeschooled 3-6 grade kids as visuals for a science class. Not only is the book a great addition on its own, it is a great place for the kids to label parts and write notes. Nice too that it's not too grown up, leaving the private matters private. Really enjoying this book and also glad there is a kindle version so I could page through the whole thing before committing to buy 30copies. Never could have found a better deal either.
